

Join us as we welcome hummingbirds to Casa de Flores!

Due to the wetter than average rainfall our region had this past year, the SLO county rodent population is seeing some of its highest numbers in nearly 20 years. Birdseed can attract field mice, squirrels, and other pests that pose potential issues for us, especially during the change of seasons. Therefore we will temporarily be removing birdseed-type feeders from the premises and placing hummingbird feeders so that we will be able to enjoy these lovely birds. We will assist you to store your personal feeders and extra food if you need help in doing so.

We appreciate your understanding.

Thank you!
